Middle Atlantic Products BGR Series Equipment Racks Now Shipping

Fairfield, NJ – Middle Atlantic Products is now shipping its groundbreaking new BGR Series racks, featuring the highest level of space efficiency and strength available in a rack system. Originally unveiled at InfoComm, the BGR Series incorporates the most comprehensive feature set currently available for hassle-free, efficient system integration in commercial and residential applications alike.

Primary benefits of the BGR Series design include time and labor savings, installation and field flexibility, superior cable management and high flow/low energy DC cooling options. Core to the BGR Series rack's enhanced functionality is the company's new patent-pending LeverLock™ Interior Management System, which facilitates mounting of small devices along the rack interior sides, and advanced cabling management. Comprised of a series of unique, tool-free vertical and horizontal lacing bars and device mounting plates, the LeverLock system promotes fast, flexible installation and servicing and can save more than 4 rackspace per enclosure in typical installations.

The BGR Series rack offers high static and UL-Listed weight capacities along with high seismic certified capacities – a stronger combination than any other rack on the market. It is GREENGUARD Indoor Air Quality Certified® and Children & Schools™ Certified, and can help towards earning LEED credits.

Middle Atlantic will have the BGR Series on display at CEDIA 2011. For technical specifications and in-depth information please visit Booth #2029, click to www.middleatlantic.com or call 1.800.266.7225
