RSH Series Custom Rackmounts Inducted Into CEDIA Product Hall of Fame

Indianapolis, IN--Middle Atlantic Products' RSH Series Custom Rackmounts became the second product to be voted into the CEDIA Product Hall of Fame following the induction of the company's groundbreaking AXS Equipment Access System in 2009.

Recognized at CEDIA Expo 2011 based on the impact they've exerted on the industry for over 28 years, Middle Atlantic RSH Series Custom Rackmounts allow virtually any AV component to be installed in a standard 19" enclosure without modifications.

Each RSH unit is quickly made to order and custom cut to provide a perfect opening for the face of the component being mounted, resulting in a neatly-trimmed installation that fits perfectly with no gaps.

There are accurate details for 10,000 components, including many introduced this year, in the measured unit database available on middleatlantic.com to make ordering fast and easy. The database has grown steadily over the years thanks to the many customers and manufacturer partners Middle Atlantic has worked with to measure applicable components.

Asked about RSH rackmounts, Jim Garrett, Market Manager of Harman's Luxury Audio Group, one of Middle Atlantic's manufacturer partners said, "Part of the beauty of the RSH Custom Rackshelf is the simplicity. The products just fit. No need to remove the feet or install rack ears on a component. And the look is fantastic. Customers love the elegant finished appearance."
